

Codonics SLS

Total Dose/Total Volume

Overview

This document describes how to setup and use the Total Dose/Total Volume (TD/TV) drug preparation method with the Codonics Safe Label System™ (SLS).

This document explains:

- ◆ How Administration Tool (AT) users can enter TD/TV information for drugs in a formulary
- ◆ How SLS 500i™ users can select TD/TV entries on 500i to provide printed syringe labels with TD/TV information

SLS Drug Preparation Methods

There are two preparation methods for managing how drugs are labeled: Normal Dilution and TD/TV.

The Normal Dilution method is commonly used in OR environments where the amount and frequency of drug administration can vary. Since the total dose being administered might not be known ahead of time, the primary information required on the syringe label is the drug name and prepared concentration.

TD/TV is commonly used when an order or prescription for a drug is issued and the drug is prepared according to the instructions in the order. TD/TV is also used in applications involving infusion pumps. Drugs prepared in this manner include the drug name, the total dose to be administered, and the total volume of the drug and diluent in the final preparation. 500i also includes the equivalent concentration of the preparation on the label for regulatory compliance.

SLS allows multiple TD/TV preparations to be associated with each drug. The preparations are set up using the AT and included as part of the SLS formulary. When a drug container is scanned on 500i, the user can select from the TD/TV preparations associated with that drug.

Notes About the TD/TV Preparation Method

Note the following about the TD/TV preparation method:

- ◆ The TD/TV information will be printed on labels that support it [for example, 30 x 80-mm Japan labels (JP-L1_vxx)] and shown on any applicable previews.

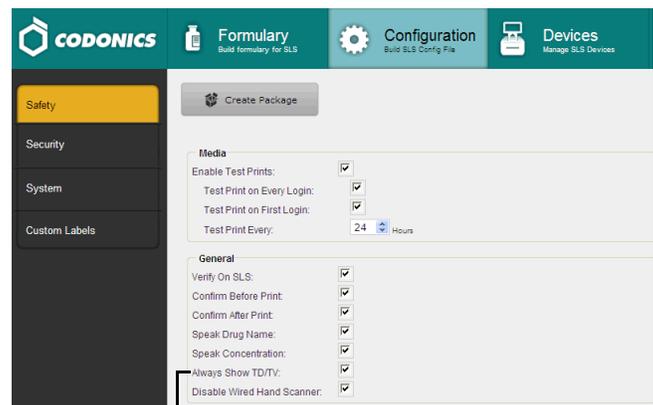

However, if the selected drug classification template does not support TD/TV information, the TD/TV dialog boxes described in this Technical Brief will still appear on 500i, but the label will not have any TD/TV information printed on it.

- ◆ TD/TV information is not encoded in the syringe barcode.
- ◆ The TD/TV function is only supported for single drugs in the formulary. It is not supported for combination drugs.
- ◆ Administer Mode will only announce the drug name and equivalent concentration, but not the TD/TV values.

On the AT— Setting the Always Show TD/TV Option

The Always Show TD/TV option, which is located on the Safety tab of the AT's Configuration Manager section, controls when the TD/TV prompt displays during the label printing procedure on 500i.

NOTE: The Always Show TD/TV option applies only to drugs that are assigned the TD/TV preparation method. For drugs that are assigned the Normal Dilution preparation method, the prompt for dilutions and diluents works as described in the SLS User's Manual.

- ◆ If the Always Show TD/TV option is selected (the default), the TD/TV prompt will always display during the label printing procedure on 500i.
- ◆ If the Always Show TD/TV option is deselected, then the TD/TV prompt will not display if there is only one TD/TV entry and one diluent. In that case, the procedure will go directly to displaying or printing the label.

To disable the Always Show TD/TV option, you must deselect the option, create a configuration package, and deploy the configuration to each 500i.

On the AT— Specifying TD/TV Entries for a Drug in the Formulary

The following procedure covers only the drug formulary settings that are specific to TD/TV. For more information about other drug formulary settings, refer to the SLS Administration Tool User’s Manual.

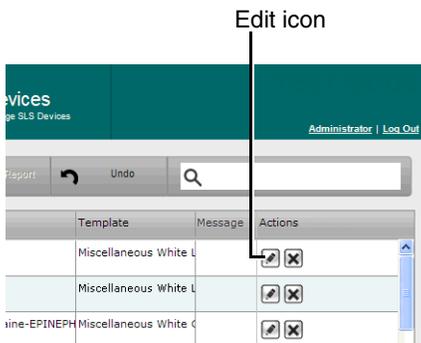

1. Select the Label Template Pack that you want to create for the specific formulary.

All Label Template Packs support TD/TV if the drug's preparation method is set to TD/TV:

- ◆ The JP-L1 Label Template Pack supports printing of TD/TV on the label.
- ◆ The JP-S1 and STD-1 Label Template Packs will show TD/TV on the 500i user interface but not print TD/TV on the label.

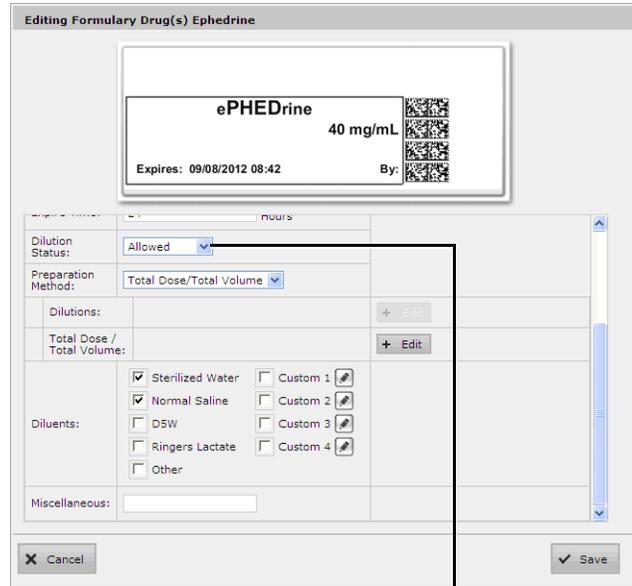

For more information about the Label Template Packs, refer to the Codonics SLS Administration Tool Localization Enhancements Technical Brief (part number 901-261-001).

2. With the formulary drug list displayed, click the drug record’s Edit icon.

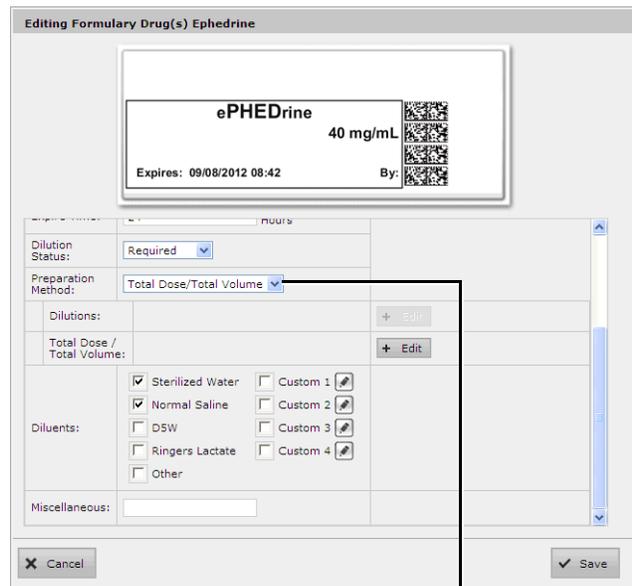

The Editing Formulary Drug(s) dialog box displays.

3. In the Dilution Status list, select the dilution status: Allowed, Not Allowed, or Required.

Dilution Status list

4. In the Preparation Method list, select Total Dose/Total Volume.

Total Dose/Total Volume selected in the Preparation Method list

5. Click the Total Dose/Total Volume Edit button.
The Set Total Dose/Total Volume dialog box displays.

If the TD/TV entries that you want to use are listed, go to step 7.

If the TD/TV entries that you want to use are not listed, you can add them. Go to step 6.

6. To add a TD/TV entry:
 - a. Select the values and units for the new entry in the Total Dose and Total Volume number and units lists.

The number lists include an **Other** option to create an **Other** TD/TV entry. An **Other** TD/TV entry allows you to specify only the combination of TD/TV units. For an **Other** entry, a 500i user will enter the values for the TD/TV unit combination when creating the label.

- b. To allow TD/TV and equivalent concentrations to be highlighted in cases for which there is a non-standard equivalent concentration that should be alerted on the 500i user interface and on printed labels, select the **Highlight** check box.
- c. Click the **Add Total Dose/Total Volume** button.

The new entry is added to the list.

d. Create additional entries as needed.

7. Select the check boxes for the TD/TV entries that apply to the drug.
8. To save your selections, click the **Save Total Dose/Total Volume** button.

The selected TD/TV entries are displayed in the **Editing Formulary Drug(s)** dialog box.

9. Enter the other formulary information required for the drug.
10. Click the **Save** button to save the formulary drug information.

The TD/TV information is displayed in the **Total Dose/Total Volume** column in the drug list.

Actions	Total Dose/Total Volumes	Diluents	Actions
	10 mg/10 mL, 20 mg/10 mL, 40 mg	Sterilized Water,	
	N/A	Sterilized Water,	
	N/A		
	N/A		

11. When you have finished entering information for the drugs in the formulary, create a formulary package and deploy it to 500i. For more information, refer to the SLS Administration Tool User's Manual.

On 500i— Entering TD/TV Values for a Syringe Label

For drugs in the formulary whose preparation method was specified as TD/TV, you will automatically be prompted to enter the TD/TV values when printing a syringe label.

1. Before scanning the drug container barcode, if the intent is to dilute the drug, set the Dilute switch to on.

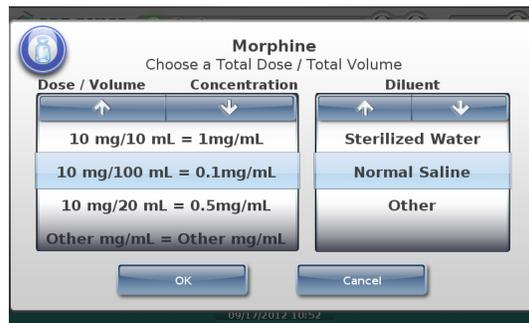

Dilute switch on position

2. Scan the drug container barcode.

NOTE: The drug will follow the verification steps, as described in the SLS User's Manual.

After the drug is identified, the prompt for the TD/TV entries displays.

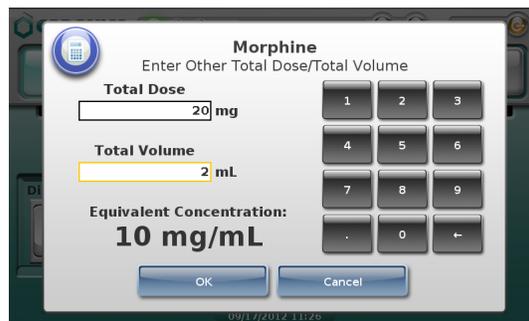

3. Press and/or drag the Dose/Volume list until the appropriate TD/TV entry and equivalent concentration is selected (that is, it is displayed under the blue highlighted bars).
4. Press and/or drag the Diluent list until the appropriate diluent is selected.

- ◆ If the dilution status for the drug is Not Allowed, the only option in the Diluent list will be None.
- ◆ If the dilution status for the drug is Allowed, a None option is included at the bottom of the Diluent list.
- ◆ If the dilution status for the drug is Required, a None option is not included in the Diluent list.

5. To save your selections, press the OK button.

If you did not select an Other TD/TV option, then continue in the label printing workflow, as described in the SLS User's Manual.

If you selected an Other TD/TV option, you are prompted to enter the dose and volume values.

6. Enter the TD/TV values in the Total Dose and Total Volume fields.

As you enter the values, the system computes the equivalent concentration and displays it in the Equivalent Concentration field.

7. To save the value entries, click the OK button.

You can continue in the label printing workflow, as described in the SLS User's Manual.

Examples of TD/TV Prompt Behavior

The following examples show the TD/TV prompt behavior on 500i during the label printing procedure. The examples are based on the drug's Dilution setting and TD/TV entries, as specified in the AT.

These are examples only; they do not represent an actual drug situation. The examples are intended to represent how the TD/TV works and its behavior in the AT and 500i.

NOTE: If the TD/TV equivalent concentration is within 1% of the original container concentration, the system considers the TD/TV to be equivalent to the original concentration. Otherwise, the system considers the TD/TV to be a dilution. For example, if the original container concentration is 0.3 g but the TD/TV entry is 0.333, then they are considered different and 0.333 is considered a dilution. A warning will be displayed for the relevant AT and 500i use cases.

Example 1

For this example:

- ◆ The drug is Morphine.
- ◆ The Always Show TD/TV configuration option on the Safety tab of the AT's Configuration Manager section was selected.
- ◆ The original drug container concentration is 10 mg/mL.
- ◆ The dilution status is set to Allowed.
- ◆ The available diluents are Normal Saline, Sterile Water, and Other.
- ◆ The TD/TV entries include multiples of the original container concentration and dilutions of the original concentration:
 - ◆ 10 mg/1 mL
 - ◆ 10 mg/10 mL
 - ◆ 10 mg/20 mL
 - ◆ 10 mg/100 mL
 - ◆ 20 mg/2 mL
 - ◆ Other mg/mL

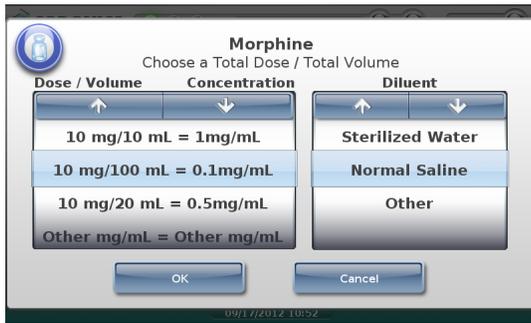

The formulary settings for this drug on the Editing Formulary Drug(s) dialog box in the AT are shown below.

On 500i:

- ◆ If the Dilute switch is set to **Off**, the TD/TV prompt will display as follows:

No diluted TD/TV entries or diluents will be shown because the Dilute switch is set to off. Only TD/TV entries with concentrations that are equivalent to the original concentration (for example, 10 mg/mL) are displayed and no diluents are displayed.

- ◆ If the Dilute switch is set to **On**, the TD/TV prompt will display as follows:

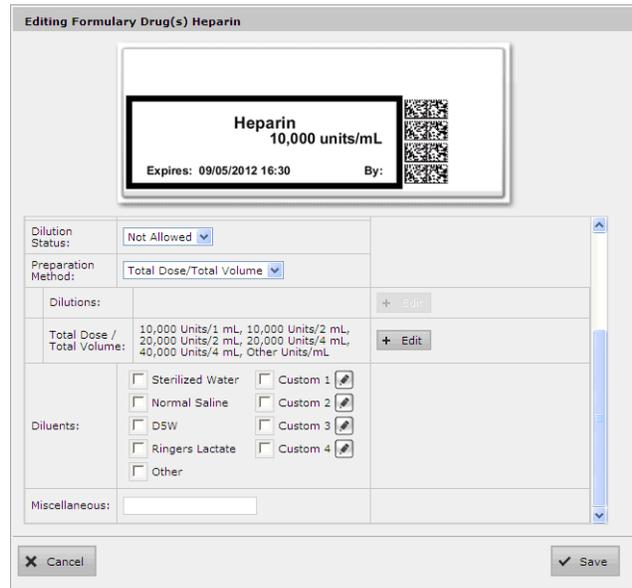

Only TD/TV entries that are dilutions of 10 mg/mL are displayed and the diluents are displayed.

Example 2

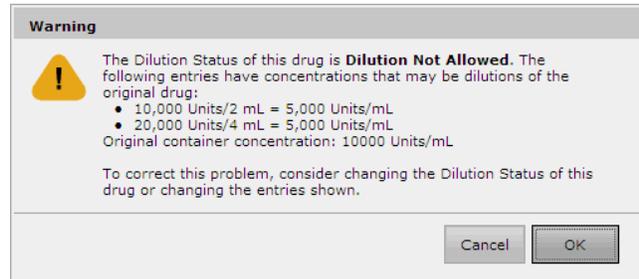

For this example:

- ◆ The drug is Heparin.
- ◆ The Always Show TD/TV configuration option on the Safety tab of the AT's Configuration Manager section was selected.
- ◆ The original drug container concentration is 10,000 Units/mL.
- ◆ The dilution status is set to Not Allowed.
- ◆ There are no available diluents.
- ◆ The TD/TV entries include multiples of the original concentration, dilutions of the original concentration, and an Other entry:
 - ◆ 10,000 Units/1 mL
 - ◆ 10,000 Units/2 mL
 - ◆ 20,000 Units/2 mL
 - ◆ 20,000 Units/4 mL
 - ◆ 40,000 Units/4 mL
 - ◆ Other Units/mL

The initial formulary settings for this drug on the Editing Formulary Drug(s) dialog box in the AT are shown below.

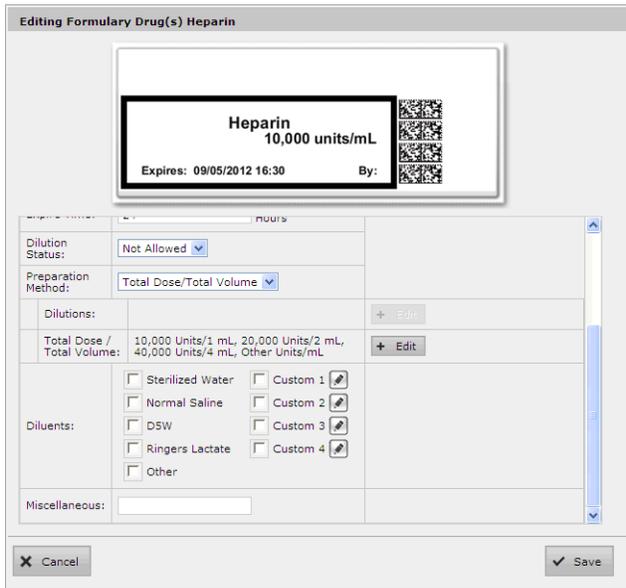

However, because dilutions are not allowed, the following prompt would be displayed after selecting TD/TV entries that represent dilutions of the original container concentration:

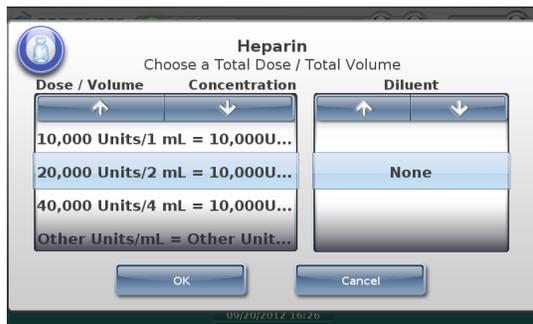

If dilutions are not intended to be included, the entries listed in the Warning message should be removed. If dilutions are intended to be included, then the Dilution Status should be changed to Allowed.

The following example shows the dilution entries removed to resolve the problem.

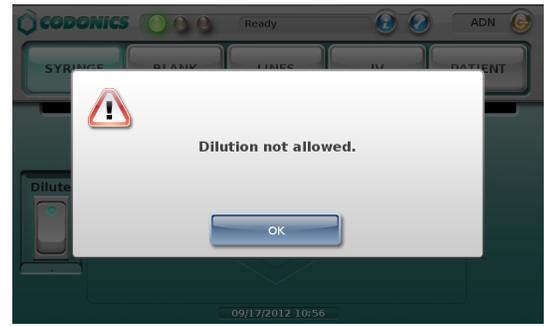

If no changes were made to the original TD/TV entries or dilution status, on 500i:

- ◆ If the Dilute switch is set to **Off**, the TD/TV prompt will display as follows:

No dilution values of 10,000 Units/mL will be shown. Only TD/TV entries that are equivalent to the original container concentration of 10,000 Units/mL are displayed (for example, 20,000 Units/2 mL), and no diluents are displayed.

- ◆ If the Dilute switch is set to **On**, the following prompt that indicates that dilutions are not allowed is displayed:

Example 3

If the Warning shown in example 2 is ignored and a TD/TV entry is a dilution but the Dilution setting is Not Allowed, then the 500i user will be able to choose a dilution but no diluents will be displayed. You should be aware that this configuration overrides the intention of not allowing dilutions.

Example 4

For this example:

- ◆ The drug is Atropine.
- ◆ The Always Show TD/TV configuration option on the Safety tab of the AT's Configuration Manager section was selected.
- ◆ The original drug container concentration is 0.5 mg/mL.
- ◆ The dilution status is set to Required.
- ◆ The available diluents are Normal Saline and Sterile Water.
- ◆ The TD/TV entries include multiples of the original container concentration, dilutions of the original concentration, and an Other entry:
 - ◆ 0.25 mg/10 mL
 - ◆ 0.5 mg/1 mL
 - ◆ 0.5 mg/5 mL
 - ◆ 0.5 mg/10 mL
 - ◆ 0.5 mg/50 mL
 - ◆ 1 mg/2 mL
 - ◆ Other mg/mL

The initial formulary settings for this drug on the Editing Formulary Drug(s) dialog box in the AT are shown below.

Editing Formulary Drug(s) Atropine

Atropine
0.5 mg/mL

Expires: 08/31/2012 00:40 By:

Total Dose / Total Volume:	+ Edit
Diluents:	<input checked="" type="checkbox"/> Sterilized Water <input type="checkbox"/> Custom 1 <input checked="" type="checkbox"/> Normal Saline <input type="checkbox"/> Custom 2 <input type="checkbox"/> DSW <input type="checkbox"/> Custom 3 <input type="checkbox"/> Ringers Lactate <input type="checkbox"/> Custom 4 <input type="checkbox"/> Other
Miscellaneous:	

Editing Formulary Drug(s) Atropine

Atropine
0.5 mg/mL

Expires: 08/31/2012 00:40 By:

Dilution Status:	Required
Preparation Method:	Total Dose/Total Volume
Dilutions:	+ Edit
Total Dose / Total Volume:	+ Edit
Diluents:	<input checked="" type="checkbox"/> Sterilized Water <input type="checkbox"/> Custom 1 <input checked="" type="checkbox"/> Normal Saline <input type="checkbox"/> Custom 2 <input type="checkbox"/> DSW <input type="checkbox"/> Custom 3 <input type="checkbox"/> Ringers Lactate <input type="checkbox"/> Custom 4 <input type="checkbox"/> Other
Miscellaneous:	

However, because dilutions are required, the following prompt would be displayed after selecting TD/TV entries that are equivalent to the original container concentration:

Based on the final settings shown above, on 500i the following TD/TV prompt displays regardless of whether the Dilute switch is set to **Off** or **On**:

Warning

The Dilution Status of this drug is **Dilution Required**. The following entries have concentrations that may not be dilutions of the original drug:

- 0.5 mg/1 mL = 0.5 mg/mL
- 1 mg/2 mL = 0.5 mg/mL

Original container concentration: 0.5 mg/mL

To correct this problem, consider changing the Dilution Status of this drug or changing the entries shown.

Atropine
Choose a Total Dose / Total Volume

Dose / Volume	Concentration	Diluent
0.25 mg/10 mL	= 0.025mg/mL	
0.5 mg/10 mL	= 0.05mg/mL	Sterilized Water
0.5 mg/5 mL	= 0.1mg/mL	Normal Saline
0.5 mg/50 mL	= 0.01mg/mL	

08/31/2012 11:10

To correct this condition, the values listed in the Warning message should be removed, so that the final settings are as shown below.

Only TD/TV entries that are dilutions are displayed, and the diluents are displayed.

Example 5

For this example:

- ◆ The drug is Morphine.
- ◆ The Always Show TD/TV configuration option on the Safety tab of the AT's Configuration Manager section was selected.
- ◆ The original drug container concentration is 10 mg/mL.
- ◆ The dilution status is set to Allowed.
- ◆ The available diluents are Normal Saline and Sterile Water.
- ◆ The TD/TV entries include multiples of the original container concentration, a concentration that is higher than the original concentration, dilutions of the original concentration, and an Other entry:
 - ◆ 10 mg/1 mL
 - ◆ 10 mg/10 mL
 - ◆ 10 mg/20 mL
 - ◆ 10 mg/100 mL
 - ◆ 20 mg/1 mL
 - ◆ Other mg/mL

The initial formulary settings for this drug on the Editing Formulary Drug(s) dialog box in the AT are shown below.

However, because the 20 mg/1 mL entry has a concentration that is higher than the original container concentration, the following prompt would be displayed after selecting the TD/TV entries:

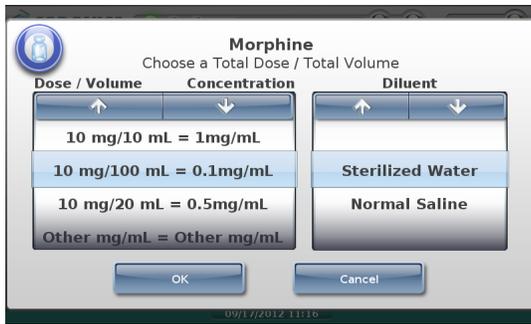

To correct this condition, the higher concentration entry listed in the Warning message should be removed, so that the final settings are as shown below.

On 500i:

- ◆ If the Dilute switch is set to Off, the TD/TV prompt will display as follows:

Only TD/TV entries whose concentration is equivalent to the original container concentration are displayed, and no diluents are displayed.

- ◆ If the Dilute switch is set to **On**, the following prompt that indicates that dilutions are allowed is displayed:

Example 6

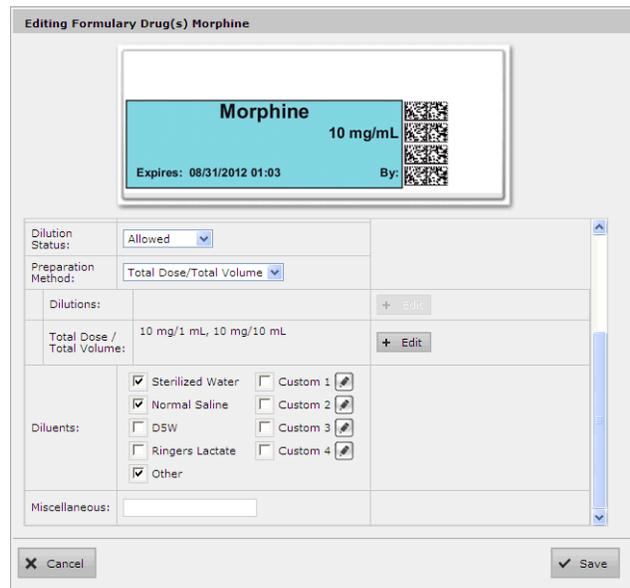

For this example:

- ◆ The drug is Morphine.
- ◆ The Always Show TD/TV configuration option on the Safety tab of the AT's Configuration Manager section was **not** selected.

NOTE: The Always Show TD/TV configuration option applies to all drugs in the formulary.

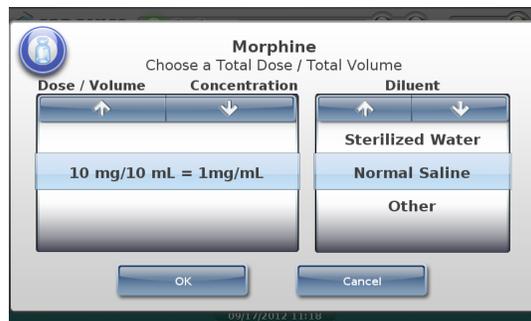

- ◆ The original drug container concentration is 10 mg/mL.
- ◆ The dilution status is set to Allowed.
- ◆ The available diluents are Normal Saline, Sterile Water, and Other.
- ◆ The TD/TV entries include a concentration that is equivalent to the original container concentration and a dilution:
 - ◆ 10 mg/1 mL
 - ◆ 10 mg/10 mL

The formulary settings for this drug on the Editing Formulary Drug(s) dialog box in the AT are shown in the screen at the top of the next column.

On 500i:

- ◆ If the Dilute switch is set to **Off**, the TD/TV entry whose concentration is equivalent to the original container concentration will be automatically selected because it is the only non-diluted concentration defined for the drug. A TD/TV prompt is not displayed.
- ◆ If the Dilute switch is set to **On**, the TD/TV prompt will display as follows:

The prompt is displayed because, even though there is only one dilution value, multiple diluents have been selected for the drug. If only one diluent had been selected, then the dilution and diluent would have been automatically selected by the system and no prompt would have been displayed.

Example 7

For this example:

- ◆ The drug is Morphine.
- ◆ The Always Show TD/TV configuration option on the Safety tab of the AT's Configuration Manager section was selected.
- ◆ The original drug container concentration is 10 mg/mL.
- ◆ The dilution status is set to Allowed.
- ◆ The available diluents are Normal Saline and Sterile Water.
- ◆ The only TD/TV entry is Other mg/mL.

The formulary settings for this drug on the Editing Formulary Drug(s) dialog box in the AT are shown below.

Editing Formulary Drug(s) Morphine

Morphine 10 mg/mL
Expires: 08/31/2012 01:56 By: [Barcode]

Dilution Status: Allowed
Preparation Method: Total Dose/Total Volume

Total Dose / Total Volume: Other mg/mL

Diluents:
 Sterilized Water Custom 1
 Normal Saline Custom 2
 D5W Custom 3
 Ringers Lactate Custom 4
 Other

Miscellaneous: [Empty]

Cancel Save

On 500i, if the Dilute switch is set to **Off**, only the Other entry will be displayed in the TD/TV prompt:

Morphine
Choose a Total Dose / Total Volume

Dose / Volume Concentration Diluent

Other mg/mL = Other mg/mL None

OK Cancel

If the Dilute switch is set to **On** and the user selects a TD/TV entry whose concentration is equivalent to the original container concentration (for example, 20 mg/2 mL), the system will display the following message to indicate that the entered TD/TV might not be a dilution:

Morphine
Enter Other Total Dose/Total Volume

! This may not be a diluted value.
